

Application and Integration Architecture Training

Learn to apply key Application Architecture techniques

Develop the ability to use Application and Integration Architecture techniques. Apply recipes and develop intuition through exercises on practical cases. Understand how Application and Integration Architecture contributes to Strategy. Apply techniques for contextualization, conceptualization, and elaboration of application and integration architecture. Evaluate the suitability of Quality Attribute Scenarios and Architectural Views, the usefulness of a Functional Application Landscape, and the reusability of a layered API architecture. Learn how to leverage architectural effort across initiatives through reference architecture, including integration styles and patterns.

Training days

Every training day starts at 9 AM and ends at 1 PM (Brussels Time). For this training, the self-paced learning period starts two weeks earlier on September 21st. The training days for this course are:

- Wednesday, October 5th
- Wednesday, October 12th
- Monday, October 17th
- Thursday, October 27th

TYPE

Specialist training

LOCATION

Online

DATE

October 2022

DURATION

3 days

INTERESTING FOR

Enterprise Architects, Solution Architects

LEARNING OBJECTIVES

- Hands-on experience with architectural drivers and framing non-functional requirements to constrain architectural solutions
- Gain deep insights into key techniques and models such as functional application landscape, system context, layering, event storming, and domain-driven design
