# Information and Data Architecture Training

Learn to apply key information architecture techniques

Develop the ability to use Information Architecture (IA) techniques. Learn how to apply an architecture perspective to address typical stakeholder concerns about information and data management. Understand how Information Architecture contributes to Strategy. Recognize the architectural challenge for data management and position related information assets in the information landscape. Contextualize data management within business operations and apply data-centric principles to detach data from applications.

Training days

Every training day starts at 9 AM and ends at 1 PM (Brussels Time). For this training, the self-paced learning period starts two weeks before the start date.
